

## Donaldson Keeps Your Compressors Running

### Did you know ...

Metal, printing and textile industries ... auto-body and machine shops ... hospitals and laboratories ... All use compressors, and Donaldson provides the filtration products to make sure they stay up and running!

### Compressor Filtration

Donaldson delivers a complete system of filtration and separation products for compressed air systems. Our technology in the field of compressed air, gas, and fluid separation extends from the compressor room to all points of use in the factory. Components are designed and matched for optimal performance, while our engineering services lead new products from concept to reality.

## Air/Oil Separators

Our full range of traditional wrapped and pleated media separators deliver high filtration efficiency and longer life, plus boasts greater energy efficiency.

Development and customized design of air/oil filters improve compressor performance.

## Formix™ Media Technology for Air/Oil Separation

Donaldson Formix™, our newest air/oil separator technology, is a true depth media that delivers improved performance in less space. Formix also offers lower restriction which results in lower energy usage.

Due to the smaller size and form flexibility of Formix, freight storage and disposal costs for separators utilizing this new media technology are significantly lower than wrapped or pleated separators.
