

Our Most Popular Exhaust Clamps

Band Clamps

Band clamps used to seal muffler inlets, outlets, elbow joints, flex pipes and system connections, and minimize noise and gas leaks. They are also used for overlapping joints and flex tube.

Stepped SealClamp™ Exhaust Clamp

- Minimal parts, lightweight and installs easily
- Better leak performance over other clamp types
- Sized from 2.5" to 6.0" diameters
- Reduce flex pipe pinching

Wide or Flat Band Clamp

- Lower cost option than Stepped SealClamp™
- Flat band conforms to the shape of straight or flex pipe without distorting the pipe
- Sized from 2.0" to 6.0" diameters

Bent Bolt Clamps

Bent bolt clamps are manufactured in heavy-duty aluminized steel to minimize corrosion and to provide increased holding power for difficult applications. They are reusable and finished with heat resistant paint in either black or silver.

Sizes range from 1.75" to 6.75" diameter

MaxGrip™ Bent Bolt

- Traditionally used for off-road applications
- For slotted, lapped tube connections and manifold connection

For tube-to-flex connections

For muffler to stack connections

Offset MaxGrip™ Bent Bolt

- Traditionally used for on-road applications
- One style for flex pipe and one style for muffler stacks
- Sized in 4.0" and 5.0" diameters

More information on bent bolt clamps is available at www.donaldson.com/en/exhaust/support/datalibrary/000216.pdf and Stepped SealClamp at www.donaldson.com/en/exhaust/support/datalibrary/000213.pdf
