

Ultra-Web® Celebrates 15 Years of Proof!

ULTRA-WEB®

High Efficiency Nanofiber Filters Built to Last

If it's blue, it's true! Engine air filters featuring Ultra-Web® Nanofiber Filtration Technology are always blue.

Donaldson Ultra-Web® Technology is the world standard for advanced nanofiber air filtration technology.

Donaldson introduced Ultra-Web, with over 80 issued and pending patents worldwide, to industrial applications more than 26 years ago and to the diesel engine market over 15 years ago.

The robust nature of its manufacturing process coupled with its patented chemistry means Ultra-Web provides a durable filtration solution in the high temperature and humid environments experienced by diesel engines. Ultra-Web Technology causes submicron particles to load on the media surface rather than disperse throughout the depth of the filter. The smaller, interfiber spaces of Ultra-Web provide higher efficiency and capture more contaminants.

INNOVATION

Original PowerCore® and PowerCore® G2 Filtration Technologies

Intake systems with original PowerCore® or PowerCore® G2 deliver even greater advantages: space efficiency; the freedom to design unique configurations to fit tight spaces; and overall design simplicity. Using patented Ultra-Web technology, PowerCore filters are up to 10 times more efficient and are more compact than standard, pleated cellulose filters.

Donaldson Endurance™ Extends Air Filter Service Intervals

In highway applications, where the contaminant is primarily submicron in size, Donaldson Endurance air filters will go twice the distance as conventional cellulose filters. The smaller, interfiber spaces of Ultra-Web have higher filter efficiency and capture more contaminants making it perfect for use in extended service filters.
