

Site: Arizona USA (hot, dry, desert)
 Turbine: General Electric 7EA
 Filter: **Donaldson GDX** (5w x 17h)
 Options: Evaporative cooler and a generator filter

← Shows tubing for the pulse air that accomplishes the self-cleaning

→ Inlet Bleed Heat.
 Can be used to reduce NO_x or to prevent ice build-up in duct.
 (Since this site is in the desert area of the southwestern US, ice is not a problem.)
