*Data represents customer experience in this particular coal mining application on a single application. Results may vary depending upon application and environmental conditions.

We are committed to providing the highest quality filters to meet our customer needs – even in extreme operating environments. We know the coal industry is highly competitive. Our mining customers find that Donaldson filters provide the highest filtration efficiency and lowest maintenance costs – a real advantage in an industry where margins are under constant pressure.

Donaldson[®]

BLUE[®]

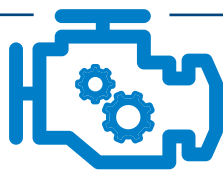

THE STAR OF THIS STORY

- Donaldson's proprietary Ultra-Web[®] fine fiber media
- Designed for extended filter maintenance programs
- Better engine protection, minimized downtime and reduced operating costs

Effective air filtration is a must. In dry conditions, dirt and coal dust are ever-present. But even in wet or snowy conditions, the combined exhaust creates a dust mixture that can be deadly for engines. This abrasive mixture can destroy an engine in a matter of hours if the air filter fails. 

Joseph Serrenho
